Profile

Recent graduate with a 2:1 BSc in Computer Science (Software Engineering), skilled in **React**, **Python** and **Java**. Experienced in collaborative environments with a passion for creating impactful software solutions as demonstrated in my university projects and client-facing experience. Bringing both problem-solving and effective communication skills, eager to apply my knowledge and skills in a professional environment.

Education

BSc Computer Science (Software Engineering)

Sep 2021 – Jul 2024 | London

Brunel University | 2:1 Honours

Dissertation: "Automatic Formatting and Syntax Error Correction of Code Snippets"

Professional Experience

Software Engineering Intern | Offdays

June 2025 – Present

- Developed "Offdays-shareables", a React + Vite TypeScript application for generating custom profile banners, successfully enhancing user engagement and brand presence.
- Took full ownership of the entire project lifecycle, integrating Google Analytics for tracking and establishing a high-quality standard for digital asset preparation and content integration.
- Engaged in continuous feedback loops through weekly manager check-ins, leveraging Git/GitHub for version control (pull requests, merge reviews). This ensured transparent communication, efficient issue resolution, and rapid adaptation to significant design and feature changes.

AWS re/Start program trainee | AWS re/Start

September 2025 – Present

- Currently enrolled in the AWS re/Start program, gaining hands-on experience in cloud fundamentals, Linux, security, networking, and Python programming.
- Actively developing a working knowledge of core AWS services in compute, storage, databases, and servers, while pursuing AWS Certified Cloud Practitioner certification.

Software Developer | The Orange Trust

Jun 2023 – Mar 2025

- Collaborated in a cross-functional team of three to develop and development for the organisation's main website, collaborating with the director to refine client requirements and using Figma to design the user interface.
- Using Agile methodology with Trello and Microsoft Excel for project management, resulting in a dedicated front page that successfully enhanced digital presence and boosted user engagement.

Coding Teacher | Innovation Pod

Feb 2025 – July 2025

- Taught beginner-friendly coding lessons to groups of 20–25 primary school students, optimising lesson flow and iterating on live coding exercises to improve comprehension of fundamental coding concepts and knowledge retention.

Projects

Frictionless, Syntax Error Correction | Final Year Project

Dec 2023 – May 2024

- Developed a full-stack tool using a React Vite frontend and MongoDB database to automate code analysis, basic syntax error detection, and formatting across 5+ programming languages, including Java and Python. Overall reducing manual debugging and indenting time.
- Architected the solution based on a research study of code quality and metrics such as Cyclomatic Complexity, implementing core functionality using Regex for pattern-based detection and a customised third-party library for automated code formatting.

CopyCat (AI Voice) | Personal Project

May 2025 – May 2025

- Built a Python-based voice assistant capable of real-time microphone recording, speech-to-text conversion (Google Speech Recognition), and text-to-speech responses (Eleven Labs API).
- Implemented smart text processing to provide dynamic and context-aware replies, including special responses to specific user inputs. Showcasing practical application of voice processing and natural language understanding.

Pinnacle Studio Architecture | Client Project

Aug 2024 – Sep 2024

- Led the development of a responsive website in a two-person agile team, managing design using Figma and implementation using React Vite through virtual paired programming and iterative feedback.
- Deployed the site via Vercel, leveraged GitHub for continuous integration and maintained direct client communication to align deliverables with user experience.

FRV – Firebase Data Dashboard | Personal Project

Jan 2025 – March 2025

- Built a serverless full-stack application handling real-time data flows between React frontend and Firestore backend, reducing traditional backend setup time by 100%.
- Implemented core functionality (data submission/retrieval) with millisecond-latency updates, hosted on Vercel for instant accessibility.

IbrahimIF.dev | Personal Project

Apr 2025 – Jun 2025

- Designed and built a dynamic online portfolio, using React + Vite for a responsive structure and Three.js for engaging 3D elements, demonstrating a blend of technical proficiency and effectively presenting my professional accomplishments and capabilities.
- Implemented diverse, unique features including hidden interactive elements, detailed project showcases, and a comprehensive Overview section, continuously improving the platform through extensive iterations to deliver a refined and polished user experience.

Skills

Programming Languages: JavaScript | Java | Python | TypeScript

Frontend Development: React.js | HTML5 | CSS | Tailwind CSS

Backend Development: Node.js | Express | REST APIs

Databases: MySQL | MongoDB Atlas | Firebase (Firestore)

Tools & Platforms: Git/GitHub | Vercel | Figma | JUnit

CS Fundamentals & Processes: Algorithms | OOP | System Design | SDLC | Agile (Scrum) | CI/CD
