

IBRAHIM FARRAH

Software Engineer

ibrahimfarrah30@gmail.com | 07428219106 | linkedin.com/in/ibrahimif | github.com/IbrahimIF | ibrahimif.dev

PERSONAL PROFILE

Graduate with a 2:1 BSc in Computer Science from Brunel University and production experience delivering full-stack applications in TypeScript, React and Python across Agile teams. Hands-on with the full software development lifecycle, from cloud infrastructure on AWS to client-facing web tools built and shipped in real products. A proactive builder motivated by technically challenging problems and writing software that works reliably in the hands of real users.

EMPLOYMENT HISTORY

Software Engineer | Coveloopers

Sep 2025 - Present

- Lead and collaborated within cross-functional teams to build production-ready applications, including an AI-driven interview platform and a secure healthcare database system.
- Utilised GitHub Actions to implement CI/CD pipelines, ensuring code merged to production met quality standards through automated testing and peer code reviews.
- Manage project backlogs using Linear and Jira, translating client and project requirements into technical tickets and participating in 15-person sprints to ensure timely delivery.
- Build scalable web applications using Next.js, TypeScript and Supabase, implementing Server-Side Rendering (SSR) and edge functions for performance.
- Conduct regular code reviews and mentor peers on clean code principles while managing environment variables and database migrations.

Software Engineer Intern | Offdays

Jun 2025 - Dec 2025

- Engineered "Offdays Shareables," a React-based image generation tool using HTML Canvas to allow users to export branded, social-ready "Out of Office" notifications.
- Built a complex Accrual Calculator using TypeScript and date-fns, implementing calendar-day methods to calculate pro-rata leave entitlements with custom rounding logic and UTC-midnight precision.
- Migrated and optimised features within a Next.js "Toolkit" project, leveraging Geist font optimisation and Chakra UI to ensure high-performance, accessible, and responsive user interfaces.
- Delivered features from initial Figma wireframes to Vercel deployment, participating in weekly feedback cycles and maintaining code integrity through Git-based peer reviews and PR management.
- Tackled unfamiliar technical debt by implementing "offline-first" logic and automated data validation, reducing manual entry errors for platform users by providing instant feedback.

AWS re/Start | Cloud Engineering Trainee

Sep 2025 - Dec 2025

- Architected and deployed secure VPC environments, configuring public/private subnets, routing tables, and Internet Gateways to host resilient web server architectures.
- Implemented the principle of least privilege using IAM roles and policies, securing S3 buckets and managing cross-service access for EC2 and Lambda resources.
- Developed Python and Bash scripts to automate Linux system administration tasks, including process monitoring, log management, and resource deployment via the AWS CLI.
- Deployed load-balanced applications using Auto Scaling groups and Amazon RDS, ensuring high availability and millisecond-latency data retrieval for simulated production environments.
- Maintained a comprehensive GitHub repository of documented labs, demonstrating proficiency in Infrastructure as Code (CloudFormation) and cloud troubleshooting.

Coding Teacher | Innovation Pod

Feb 2025 - Jul 2025

- Delivered structured coding lessons to cohorts of 20–25 students across three schools, translating Computer Science principles such as variables, selection, iteration and functions into engaging content.
- Conducted live coding sessions in Python, JavaScript and HTML to demonstrate logic flow and syntax, encouraging students to apply these techniques to logic puzzles and debugging situations.
- Simplified complex technical explanations for varying skill levels, adapting lesson plans to improve knowledge retention and ensure students could apply fundamental logic to independent projects.
- Guided students through multiple development platforms, including Scratch and MakeCode, enabling students to adapt their programming knowledge to different technical environments and real-world scenarios.
- Managed classroom dynamics and delivery schedules across multiple sites, maintaining high engagement through interactive coding challenges and collaborative debugging exercises.

Software Developer | The Orange Trust

Jun 2023 - Mar 2025

- Collaborated in a cross-functional team of three to develop the organisation's primary website, resulting in a dedicated front page that increased user engagement by 80% and modernised the NGO's digital identity.
- Utilised Figma to design high-fidelity interfaces and interactive prototypes, conducting multiple usability testing sessions with the Director to ensure the design served donors, volunteers and staff effectively.
- Translated the Director's requirements into functional specifications, bridging the gap between social objectives and technical software requirements.

- Implemented Agile practices using Trello and Excel to manage the project lifecycle, improving delivery efficiency by 30% through iterative feedback loops and consistent progress tracking.
- Contributed to the digital infrastructure of a global NGO that supports underserved communities across Zanzibar, Algeria and Morocco, ensuring the platform effectively facilitates volunteer outreach and medical aid coordination.

PROJECTS

CV Mix & Match | Independent Project

Aug 2025 – Apr 2026

- Built a full-stack CV tailoring tool using React, Vite, Python, and FastAPI that parses job descriptions, extracts key requirements, and automatically recommends relevant CV sections from a personal master database, reducing tailoring time from 20+ minutes to under 2 minutes per application.
- Implemented a smart recommendation engine, live CV preview, and one-click DOCX/ PDF export with preserved formatting, enabling rapid generation of role-specific CVs without manual copy-pasting.

Autonomous ML Optimisation Platform | Encode AI Hackathon Project

Mar 2026 – Mar 2026

- Collaborated in a team of three to develop a React dashboard for an autonomous machine learning experimentation platform, visualising real-time training progress and model performance improvements (0.72 to 0.83 ROC-AUC) across iterative runs.
- Implemented asynchronous polling and state management to integrate with a FastAPI backend, displaying live experiment status, iteration history and terminal-style execution feedback using Framer Motion animations and Recharts charts.

Application Tracking System | Independent Project

Dec 2025 – Feb 2026

- Built a local-first desktop application using Electron, React (Vite), Node.js and SQLite to replace Excel-based job tracking, enabling structured data entry, automated validation and management of 100+ applications.
- Implemented analytics for trends analysis and performance comparison, providing actionable insights into job search strategy while ensuring all data remained securely stored offline.

AI Media Analysis Platform | AWS Hackathon Project

Jan 2026 – Jan 2026

- Collaborated in an intensive 3-day AWS hackathon with senior architects to build a scalable, serverless AI platform using Python, AWS Bedrock, Transcribe and Lambda, automating transcription, summarisation and Q&A for the Royal Society of Chemistry's Faraday Discussions (150+ hours of annual dialogue).
- Reduced publication timelines by 90% and manual effort by 80%, saving 6 FTE days per event using Amazon S3, OpenSearch and custom vocabularies.

Offline Medical Database Application | Client Project

Oct 2025 – Nov 2025

- Co-engineered a Next.js and TypeScript MVP deployed on Raspberry Pi hardware to enable secure patient data capture in zero-connectivity environments across the Algerian Sahara.
- Designed a modular, offline-first database with strict TypeScript validation and local persistence, delivering a field-ready solution that was successfully adopted and scaled by the internal medical team.

EDUCATION

Brunel University: BSc Computer Science (Software Engineering)

Sep 2021 - Jul 2024

- Grade Achieved: Upper Second-Class Honours
- Dissertation: "Automatic Formatting and Syntax Error Correction of Code Snippets"

TECHNICAL & OTHER SKILLS

Programming Languages: Java | SQL | TypeScript | JavaScript | Python | Golang

Frontend Development: React | Vite | Next.js | HTML | CSS/Tailwind | Three.js

Cloud & Backend Development: AWS (EC2, S3, Lambda, IAM) | VPC | Node.js | RESTful APIs | FastAPI | Serverless | Express

Tools & Databases: Git/GitHub | GitHub Actions | MySQL | MongoDB Atlas | Firebase (Firestore) | SQLite | Supabase | PostgreSQL

CS Fundamentals & Processes: Algorithms | OOP | System Design | SDLC | Agile (Scrum) | CI/CD
