Profile

Recent graduate with a 2:1 BSc in **Computer Science (Software Engineering)**, skilled in **Python, Java** and **TypeScript**. Experienced in the **full software development lifecycle** and **Agile methodologies**. Passionate about creating impactful software, solving problems logically, and **collaborating effectively**. Eager to apply my skills in professional environments and continue learning.

Education

BSc Computer Science (Software Engineering)

Sep 2021 – Jul 2024 | London

Brunel University | 2:1 Honours

Dissertation: "Automatic Formatting and Syntax Error Correction of Code Snippets"

Professional Experience

AWS re/Start program trainee | AWS re/Start

Sep 2025 – Dec 2025

- Completed an intensive 12-week AWS re/Start bootcamp, gaining hands-on experience with **Linux, networking, security**, and **scripting** through real cloud labs and scenario-based projects using core AWS services including **EC2, S3, VPC, IAM, RDS**, and **Lambda**.
- Developed practical cloud operations skills by deploying, configuring, and troubleshooting AWS environments, while strengthening communication and problem-solving skills and progressing toward **AWS Certified Cloud Practitioner certification**.

Software Engineering Intern | Offdays

Jun 2025 – Dec 2025

- Developed** multiple user-facing applications using **React, Vite** and **TypeScript**, including Offdays Shareables, Offdays Toolkit and Offdays Accrual, built based on manager requirements and contributed to improved **usability** and **user engagement** within the Offdays environment.
- Managed** the **development lifecycle** across projects, from feature planning to deployment, improving **product quality** and integrating features efficiently across multiple applications.
- Collaborated** closely with the manager through weekly **feedback cycles**, using **Git/GitHub** for version control (**pull requests, code reviews and merges**) to ensure transparent communication, efficient issue resolution and **rapid iteration** in response to evolving design and feature requirements.

Software Developer | The Orange Trust

Jun 2023 – Mar 2025

- Collaborated** in a **cross-functional team** to develop and development for the organisation's main website, collaborating with the director to **refine client requirements** and using Figma to design the user interface.
- Using **Agile methodology** with Trello for project management, resulting in a dedicated front page that successfully enhanced digital presence and boosted user engagement.

Projects

Client Data Management Application | Client Project

Oct 2025 – Nov 2025

- Led** the development of an offline client data management MVP using the **T3 stack (TypeScript)** with **SQLite** for secure local data storage, enabling users to add, search, and view client records while **providing and collecting iterative feedback live** to refine requirements.
- Created comprehensive technical documentation** and **collaborated** with one other developer to deliver a **robust cross-platform application**, ensuring the MVP functioned reliably across multiple desktop environments and established a clean foundation for **future scalability**.

Frictionless, Syntax Error Correction | Final Year Project

Dec 2023 – May 2024

- Developed a **full-stack** tool using a React Vite frontend and MongoDB database to automate **code analysis, basic syntax error detection**, and formatting across 5+ programming languages, including **Java** and **Python**. Overall reducing manual debugging and indenting time.
- Architected the solution based on a **research study of code quality** and metrics such as Cyclomatic Complexity, implementing core functionality using Regex for **pattern-based detection** and a customised third-party library for **automated code formatting**.

Car-Park-App | University Project

Nov 2023 – Dec 2023

- Coded a **multi-threaded client-server** car park management system in **Java**, demonstrating **robust network computing** principles, including **concurrent access control** and **socket communication** for real-time space tracking.
- Designed and implemented distinct client roles for car park entrances and exits, ensuring reliable **data synchronisation** with the central server and validating **system integrity** through comprehensive testing of locking mechanisms.

CopyCat (AI Voice) | Personal Project

May 2025 – May 2025

- Built a **Python-based** voice assistant capable of real-time microphone recording, **speech-to-text conversion** and **text-to-speech responses** (Eleven Labs API).
- Implemented smart text processing to provide dynamic and context-aware replies, including special responses to specific user inputs. Showcasing practical application of **voice processing** and **natural language understanding**.

Skills

Programming Languages: Java | Python | JavaScript | TypeScript

Frontend Development: React | Vite | Next.js | HTML | CSS | Three.js | Socket.IO

CS Fundamentals & Processes: Algorithms | OOP | System Design | SDLC | Agile (Scrum) | CI/CD

Backend Development: Node.js | Express | REST APIs | AWS (Cloud Fundamentals)

Tools & Databases: Git/GitHub | JUnit | MySQL | MongoDB Atlas | Firebase (Firestore) | SQLite
