

# IBRAHIM FARRAH

## Software Engineer

ibrahimfarrah30@gmail.com | 07428219106 | linkedin.com/in/ibrahimif | github.com/IbrahimIF | ibrahimif.dev

### PERSONAL PROFILE

---

Computer Science graduate (2:1, Brunel University) with production experience delivering full-stack applications in TypeScript, Python and React across Agile teams. Delivered live client projects through The Cloud Crew, including an AI-powered assessment platform and a secure offline medical database, and built a serverless AI pipeline in a 3-day AWS hackathon. Strong cloud infrastructure foundations from AWS re/Start. I help run Covelopers, a software community, where I set the technical direction and ship products with a team end to end. A proactive builder, motivated by technically challenging problems and getting software reliably into the hands of real users.

### EMPLOYMENT HISTORY

---

#### Junior Consultant | The Cloud Crew

Apr 2026 - Sep 2026

- Delivered live client projects across software development, cloud and AI, including CricketAI, supported by technical coaching from a Capgemini Technical Coach.
- Led technical delivery on a coaching and consulting client's website rebuild, completing a site audit, recommending the tech stack, and overseeing delivery by two team members.
- Documented and handed over project knowledge, including a non-technical user guide, to support continued client use after each engagement's close.

#### Cloud Engineering Trainee | AWS re/Start

Sep 2025 - Dec 2025

- Architected secure VPC environments with public/private subnets and routing, and applied least-privilege IAM roles and policies to secure S3, EC2 and Lambda resources.
- Developed Python and Bash scripts to automate Linux system administration tasks, including process monitoring, log management, and resource deployment via the AWS CLI.
- Deployed load-balanced applications using Auto Scaling groups and Amazon RDS, ensuring high availability and millisecond-latency data retrieval for simulated production environments.
- Maintained a GitHub repository of 68 documented labs, demonstrating proficiency in Infrastructure as Code (CloudFormation) and cloud troubleshooting.

#### Software Engineer | Covelopers

Jul 2025 - Present

- Co-founded Covelopers and set its technical direction and engineering priorities directly, working self-directed rather than to a reporting line.
- Led and collaborated within cross-functional teams to build and ship full-stack web applications, including an AI-driven interview platform and a secure healthcare database system, using Next.js, TypeScript and Supabase.
- Maintained code quality through CI/CD pipelines, automated testing and peer code review, while managing environment variables and database migrations.
- Managed project backlogs using Linear and Jira, translating requirements into technical tickets and participating in 15-person sprints to ensure timely delivery.

#### Software Engineer Intern | Offdays

Jun 2025 - Dec 2025

- Offdays is a personal leave planner that helps people map annual leave and bank holidays before they submit anything through work. I built three software tools for it, covering accrual calculation, branded out-of-office images and leave requests.
- Designed and built a TypeScript accrual calculator with calendar-day logic and custom rounding, and a Next.js toolkit with reusable Chakra UI components, with Vitest set up for unit testing.
- Delivered 5 features from requirements to deployment, including form validation in the leave request builder, working through weekly meetings and code reviews with the manager.

### PROJECTS

---

#### Offline Medical Database Application | Client Project

Oct 2025 - Nov 2025

- Co-engineered a Next.js and TypeScript MVP deployed on Raspberry Pi hardware to enable secure patient data capture in zero-connectivity environments across the Algerian Sahara.
- Designed a modular, offline-first database with strict TypeScript validation and local persistence, delivering a field-ready solution that was successfully adopted and scaled by the internal medical team.

#### AI Media Analysis Platform | AWS Hackathon Project

Jan 2026 - Jan 2026

- Collaborated in an intensive 3-day AWS hackathon with senior architects to build a scalable, serverless AI platform using Python, AWS Bedrock, Transcribe and Lambda, automating transcription, summarisation and Q&A for the Royal Society of Chemistry's Faraday Discussions (150+ hours of annual dialogue).
- Reduced publication timelines by 90% and manual effort by 80%, saving 6 FTE days per event using Amazon S3, OpenSearch and custom vocabularies.

#### CricketAI | Client Project via The Cloud Crew

May 2026 - Sep 2026

- Delivered CricketAI, an AI-powered assessment platform for an early-stage EdTech client, as part of Cloud Crew's skills-based volunteering programme, a Capgemini partner, with technical coaching from a Capgemini Technical Coach.

- Improved processing performance by running multiple AI evaluations concurrently, and fixed a data reliability issue that was causing assessment results to be lost.
- Added safeguards against malicious and malformed input, and authored the documentation used to hand the platform over to the client.

## EDUCATION

---

**Brunel University: BSc Computer Science (Software Engineering)**

**Sep 2021 - Jul 2024**

- **Grade Achieved:** Upper Second-Class Honours
- **Dissertation:** "Automatic Formatting and Syntax Error Correction of Code Snippets"

## TECHNICAL & OTHER SKILLS

---

**Languages & Frameworks:** SQL | TypeScript | JavaScript | Python | React | Next.js

**Cloud, Backend & Databases:** AWS Bedrock | AWS (EC2, S3, Lambda, IAM) | FastAPI

**Tools, Platforms & Fundamentals:** Git/GitHub | Agile (Scrum) | CI/CD
