Profile

Recent graduate with a 2:1 BSc in Computer Science specialised Software Engineering, skilled in **React**, **Java** and **Python**. Experienced in collaborative environments with a passion for creating impactful software solutions as demonstrated in my university projects and client-facing experience. Bringing both problem-solving and effective communication skills, eager to apply my knowledge and skills in a professional environment.

Education

BSc Computer Science (Software Engineering)

Sep 2021 – Jul 2024 | London

Brunel University | 2:1 Honours

Dissertation: "Automatic Formatting and Syntax Error Correction of Code Snippets"

A-Level or equivalent in Level 3 Extended Diploma in Information Technology

Sep 2019 – Jun 2021 | London

New City College | Triple Distinction (144 UCAS Points)

GCSEs | St Pauls Way Trust School

2015 – 2019 | London

10 GCSEs, Grades (6-4), including Digital Applications (ICT) (6)

Projects

CopyCat (AI Voice) | Personal Project

May 2025 – May 2025

- Built a **Python**-based voice assistant capable of real-time microphone recording, speech-to-text conversion (Google Speech Recognition), and text-to-speech responses (Eleven Labs API).
- Implemented smart text processing to provide dynamic and context-aware replies, including special responses to specific user inputs. Showcasing practical application of voice processing and natural language understanding.

FRV – Firebase Data Dashboard | Personal Project

Jan 2025 – March 2025

- Built a serverless **full-stack** application handling **real-time data flows** between **React** frontend and **Firestore** backend, reducing traditional backend setup time by 100%.
- Implemented core functionality (data submission/retrieval) with millisecond-latency updates, hosted on Vercel for instant accessibility.

Terminal Games | Personal Project

Dec 2024 – Feb 2025

- Developed a collection of **Python**-based remakes of classic games, including Snake and Rock Paper Scissors, that are playable directly in the terminal using WASD controls for gameplay.
- Coded an ASCII art generator, images converted to text-based art displayed within the terminal, showcasing technical proficiency in handling **Python** libraries and terminal outputs.

Pinnacle Studio Architecture | Client Project

Aug 2024 – Sep 2024

- Led the development of a responsive website in a **two-person agile team**, managing design using **Figma** and implementation using **React Vite** through virtual paired programming and iterative feedback.
- Deployed the site via **Vercel**, leveraged **GitHub** for continuous integration and maintained direct client communication to align deliverables with user experience.

Frictionless, Syntax Error Correction | Final Year Project

Dec 2023 – May 2024

- Coded a tool aimed at processing and supporting over 5 programming languages, including **Java** and **Python**, helping developers automatically identify issues, improving code readability, reducing the time spent on manual debugging and indenting by 20%.
- A **full-stack** application Implemented using **React Vite** and **MongoDB Atlas**, conducted in-depth research about programming language structures, refactoring techniques and code smells.

Pneumonia Detection (AI University Assessment) | University Project

Nov 2023 – Jan 2024

- For an **AI** course, I built and fine-tuned a deep learning model to pinpoint pneumonia in CT scans, learning to distinguish between healthy and affected images.
- Trained and tested this model using a given dataset, showcasing my ability to manage **machine learning** projects from start to finish and enhance model performance.

Car-Park-App | University Project

Nov 2023 – Dec 2023

- Coded a multi-threaded client-server car park management system in **Java**, demonstrating robust network computing principles, including concurrent access control and socket communication for real-time space tracking.
- Designed and implemented distinct client roles for car park entrances and exits, ensuring reliable data synchronisation with the central server and validating system integrity through comprehensive testing of locking mechanisms.

The Orange Trust Site | Client Project

Oct 2022 – Jun 2023

- Developed an interactive website in a team of 3 for The Orange Trust website, collaborating closely with the director and conducted iterative feedback loops in order to refine and meet **client requirements**.
- Using management tools such as **Trello** and **Microsoft Excel** for keeping track of progress and **Figma** for designing the site.

Ziphon LTD, Energy Site | University Group Project

Oct 2022 – Apr 2023

- Coded a **full-stack** application that provides feedback on energy consumption reduction using **React JS, HTML CSS, Express and MySQL**, overcame scalability issues and optimised **database** queries to handle large data sets.
- Lead and collaborated with a team of 4, using the **Agile Scrum Framework** to effectively manage a workload initially intended for 8 members, ensuring timely project completion and constant feedback loops.

Airport System | University Group Project

Oct 2021 – March 2022

- Developed an Airline Seating Plan using **Java** for my first-year university project, where 8 members worked on separate components to create a complete airport system. Using the **Waterfall Methodology** and **Git** in order to coordinate and merge the individual components.
- Strengthened **Java** programming expertise, gained experience with **JUnit** and manual testing, and honed skills in time management, collaboration, and maintaining technical documentation.

Work Experience

Coding Teacher | Innovation Pod

Feb 2025 – Present

- Teaching in beginner-friendly **coding** lessons for groups of 20-25 primary school students, using **live coding examples** to help their comprehension of fundamental **coding concepts** and fostering an interest in technology.
- Optimised lesson flow and adjusted explanation for varying skill levels, iterating on exercises to improve engagement and knowledge retention. Ensuring lessons are fun, interactive and well organised.

Software Developer (Volunteer) | The Orange Trust

Jun 2023 – Present

- Collaborated with cross-functional teams, using agile to streamline project cycles, refining client requirements through feedback loops and improving delivery efficiency by 30%.
- Developed a dedicated front page in a team for The Orange Trust. Boosting user engagement and enhancing the organisation's digital presence.
- Currently contributing to the development of a medical software for Tanzania and Morocco, developing a digitised health records system to improve accessibility and reduce retrieval time by 50%.

Web Developer (Volunteer) | East London Waterworks Park

Nov 2024 – Feb 2025

- Improved the website and digital infrastructure for East London Waterworks Park, supporting its mission to create a biodiverse, community-owned park. Collaborated with a community-led working group to enhance user engagement and communication of the park's vision.

Technology Internship Experience | IEUK - Bright Network

Jun 2024 – Jun 2024

- Gained first-hand insights through networking, bespoke panels and interactive workshops with industry giants such as **Lloyds Banking, Deloitte, IBM** and **BT Group**. Building awareness of key technology trends.

Technical Secretary | Orange Trust World Issues Society, Brunel University

Nov 2023 – May 2024

- **Co-founded** and managed committee meetings, venue bookings and minute-taking for society **administration**, ensuring smooth and efficient operations.
- Assisted with more than two in-person events per semester, using software and tech devices for ticketing and maintaining society records.

- Delivered in-person support to 10 customers weekly, focusing on the customer's needs in order to resolve and repair a range of **IT** issues on the spot, such as recovering corrupted data using Windows Recovery, delivering high-quality support under tight deadlines.

Skills

Programming Languages: JavaScript | Java | Python | TypeScript

Frontend Development: React.js | Next.js | HTML | HTML5 | CSS | CSS3 | Tailwind CSS

Backend Development: Node.js | Express | REST APIs

Databases: MySQL | MongoDB | MongoDB Atlas | Firebase

Tools & Platforms: Git | GitHub | Vercel | Figma | Visual Studio Code | JUnit

CS Fundamentals: Algorithms | OOP | System Design | SDLC

Methodologies: Agile (Scrum) | CI/CD

Currently Learning: AWS Cloud Practitioner | Golang
