Profile

Graduate with a **2:1 BSc in Computer Science (Software Engineering)** and hands-on experience delivering **full-stack, client-facing applications** and cloud-based solutions. Proficient in **Python, Java and TypeScript**, with practical experience using **AWS** and working across the **full software development lifecycle** in collaborative, **Agile teams**. A proactive problem-solver with strong communication skills, motivated to build scalable, reliable systems.

Education

BSc Computer Science (Software Engineering)

Sep 2021 – Jul 2024 | London

Brunel University | 2:1 Honours

Dissertation: "Automatic Formatting and Syntax Error Correction of Code Snippets"

Professional Experience

Salesforce Platform Training Programme | Salesforce

May 2025 – Present

- **Platform Training:** Industry-led Salesforce training with hands-on platform work using Trailhead modules and playgrounds, developing core administrator skills in **data modelling, user permissions, reports, dashboards** and **basic automation**.
- **Certification Preparation:** Prepared for the Salesforce Administrator certification through guided sessions with a Salesforce specialist, building practical understanding of **CRM configuration, business processes** and **Salesforce's AI-enabled ecosystem**.

AWS re/Start program trainee | AWS re/Start

Sep 2025 – Dec 2025

- **Technical Training:** Completed a 12-week **cloud bootcamp** covering **Linux, networking, security** and **scripting**, with hands-on labs using **EC2, S3, VPC, IAM, RDS** and **Lambda**.
- **Cloud Operations:** Built, configured and troubleshooted **AWS environments**, developing practical **cloud operations** skills while progressing towards **AWS Certified Cloud Practitioner** certification.

Software Engineering Intern | Offdays

Jun 2025 – Dec 2025

- **Application Development:** Built multiple **user-facing applications** using **React, Vite** and **TypeScript**, including **Offdays Shareables, Toolkit** and **Accrual**, improving usability and engagement across the platform.
- **Project Lifecycle Management:** Managed features from **planning to deployment**, improving product quality and ensuring efficient **cross-application integration**.
- **Collaboration & Version Control:** Worked closely with the manager through weekly feedback cycles, using **Git/GitHub (PRs, code reviews, merges)** to support clear communication and rapid iteration.

Projects

Application Tracking System | Personal Project

Dec 2025 – Feb 2026

- **Desktop Application Development:** Built a **local-first desktop application** using **Electron, React (Vite), Node.js** and **SQLite** to replace Excel-based job tracking, enabling structured data entry, automated validation and management of **100+ applications**.
- **Analytics & Insights:** Implemented analytics for **trends analysis** and performance comparison, providing actionable insights into job search strategy while ensuring all data remained **securely stored offline**.

AI Media Analysis Platform | Group Hackathon Project

Jan 2026 – Jan 2026

- **System Development:** Collaborated in an intensive 3-day **AWS hackathon** with senior architects to build a scalable, **serverless AI platform** using **Python, AWS Bedrock, Transcribe** and **Lambda**, automating transcription, summarisation and Q&A for the Royal Society of Chemistry's Faraday Discussions (150+ hours of annual dialogue).
- **Performance Impact:** Reduced publication timelines by **90%** and manual effort by **80%**, saving **6 FTE days per event** using **Amazon S3, OpenSearch** and custom vocabularies.

Client Data Management Application Client Project	Oct 2025 – Nov 2025
• Client-Facing Development: Co-led development of a scalable, offline-first system using Next.js and TypeScript, acting as the primary client interface to refine requirements. • Architecture & Validation: Designed modular database architecture and API logic with strict data validation, delivering a secure, cross-platform solution with full technical documentation and future scalability.	
Frictionless, Syntax Error Correction Final Year Project	Dec 2023 – May 2024
• Tool Development: Built a full-stack code analysis tool using React Vite and MongoDB database to automate syntax checking and formatting across 5+ programming languages, including Java and Python, reducing debugging time by 20%. • Research & Architecture: Designed the system using code quality metrics such as Cyclomatic Complexity, implementing Regex-based detection and customised code formatting libraries.	
Car-Park-App University Project	Nov 2023 – Dec 2023
• Systems Programming: Developed a multi-threaded client-server car park management system in Java, implementing socket communication and concurrent access control. • System Validation: Designed separate client roles for entrances and exits, validating data synchronisation and system integrity through comprehensive testing of locking mechanisms.	

Skills

Programming Languages: Python | JavaScript | TypeScript | SQL | Java

Frontend Development: React | Vite | Next.js | HTML | CSS/Tailwind | Three.js

Cloud & Backend Development: AWS (EC2, S3, Lambda) | Node.js | Express | RESTful APIs

Tools & Databases: Git/GitHub | JUnit | MySQL | MongoDB Atlas | Firebase (Firestore) | SQLite

CS Fundamentals & Processes: Algorithms | OOP | System Design | SDLC | Agile (Scrum) | CI/CD
