Profile

Graduate with a **2:1 BSc in Computer Science (Software Engineering)** and hands-on experience delivering **full-stack, client-facing applications** and cloud-based solutions. Proficient in **Python, Java and TypeScript**, with practical experience using **AWS** and working across the **full software development lifecycle** in collaborative, **Agile teams**. A proactive problem-solver with strong communication skills, motivated to build scalable, reliable systems.

Skills

- **Programming Languages:** Python | JavaScript | TypeScript | SQL | Java
- **Frontend Development:** React | Vite | Next.js | HTML | CSS/Tailwind | Three.js
- **Cloud & Backend Development:** AWS (EC2, S3, Lambda, IAM) | VPC | Node.js | Express | RESTful APIs | FastAPI | Serverless
- **Tools & Databases:** Git/GitHub | GitHub Actions | MySQL | MongoDB Atlas | Firebase (Firestore) | SQLite | Supabase
- **CS Fundamentals & Processes:** Algorithms | OOP | System Design | SDLC | Agile (Scrum) | CI/CD

Professional Experience

Software Engineer | Covelopers

Sep 2025 – Present

- **Technical Delivery:** Lead and collaborated within cross-functional teams to build production-ready applications, including an AI-driven interview platform and a secure healthcare database system.
- **Engineering Workflow:** Utilised GitHub Actions to implement CI/CD pipelines, ensuring code merged to production met quality standards through automated testing and peer code reviews.
- **Agile Coordination:** Manage project backlogs using Linear and Jira, translating client and project requirements into technical tickets and participating in 15-person sprints to ensure timely delivery.
- **Full-Stack Development:** Build scalable web applications using Next.js, TypeScript and Supabase, implementing Server-Side Rendering (SSR) and edge functions for performance.
- **Quality Assurance:** Conduct regular code reviews and mentor peers on clean code principles while managing environment variables and database migrations.

Salesforce Platform Trainee | Salesforce

May 2025 – Present

- **Platform Administration:** Developed core administrator competencies through hands-on configuration of data models, user permissions (Profiles/Permission Sets), and security settings within Salesforce Trailhead playgrounds.
- **Process Automation & Reporting:** Designed custom reports and dynamic dashboards to provide business insights, utilising Flow Builder to automate complex business processes and improve operational efficiency.
- **Peer Leadership & Collaboration:** Acted as a cohort lead by founding and managing digital study forums, coordinating group sessions to deconstruct technical exam concepts and peer-review CRM configurations.
- **Ecosystem Expertise:** Built a practical understanding of Salesforce's AI-enabled ecosystem (Einstein) and business process mapping in preparation for the Salesforce Administrator Certification.

Cloud Engineering Trainee | AWS re/Start

Sep 2025 – Dec 2025

- **Cloud Infrastructure & Networking:** Architected and deployed secure VPC environments, configuring public/private subnets, routing tables, and Internet Gateways to host resilient web server architectures.
- **Security & Identity Management:** Implemented the principle of least privilege using IAM roles and policies, securing S3 buckets and managing cross-service access for EC2 and Lambda resources.
- **Automation & DevOps Scripting:** Developed Python and Bash scripts to automate Linux system administration tasks, including process monitoring, log management, and resource deployment via the AWS CLI.
- **Scalability & Performance:** Deployed load-balanced applications using Auto Scaling groups and Amazon RDS, ensuring high availability and millisecond-latency data retrieval for simulated production environments.
- **Technical Documentation:** Maintained a comprehensive GitHub repository of documented labs, demonstrating proficiency in Infrastructure as Code (CloudFormation) and cloud troubleshooting.

Software Engineering Intern | Offdays

Jan 2025 – Jul 2025

- **Full-Stack Feature Development:** Engineered "Offdays Shareables," a React-based image generation tool using HTML Canvas to allow users to export branded, social-ready "Out of Office" notifications.
- **Financial Logic Programming:** Built a complex Accrual Calculator using TypeScript and date-fns, implementing calendar-day methods to calculate pro-rata leave entitlements with custom rounding logic and UTC-midnight precision.
- **Modern Web Architecture:** Migrated and optimised features within a Next.js "Toolkit" project, leveraging Geist font optimisation and Chakra UI to ensure high-performance, accessible, and responsive user interfaces.
- **Agile Integration & Quality:** Delivered features from initial Figma wireframes to Vercel deployment, participating in weekly feedback cycles and maintaining code integrity through Git-based peer reviews and PR management.
- **Technical Problem Solving:** Tackled unfamiliar technical debt by implementing "offline-first" logic and automated data validation, reducing manual entry errors for platform users by providing instant feedback.

Software Developer (Volunteer) | The Orange Trust

Jan 2025 – Jul 2025

- **Digital Transformation:** Collaborated in a cross-functional team of three to develop the organisation's primary website, resulting in a dedicated front page that increased user engagement by 80% and modernised the NGO's digital identity.
- **UI/UX Prototyping:** Utilised Figma to design high-fidelity interfaces and interactive prototypes, conducting multiple usability testing sessions with the Director to ensure the design served donors, volunteers and staff effectively.
- **Requirements Engineering:** Translated the Director's requirements into functional specifications, bridging the gap between social objectives and technical software requirements.
- **Agile Project Coordination:** Implemented Agile practices using Trello and Excel to manage the project lifecycle, improving delivery efficiency by 30% through iterative feedback loops and consistent progress tracking.
- **Global Community Impact:** Contributed to the digital infrastructure of a global NGO that supports underserved communities across Zanzibar, Algeria and Morocco, ensuring the platform effectively facilitates volunteer outreach and medical aid coordination.

Coding Teacher | Innovation Pod

Jan 2025 – Jul 2025

- **Technical Instruction:** Delivered structured coding lessons to cohorts of 20–25 students across three schools, translating Computer Science principles such as variables, selection, iteration and functions into engaging content.
- **Live Demonstration:** Conducted live coding sessions in Python, JavaScript and HTML to demonstrate logic flow and syntax, encouraging students to apply these techniques to logic puzzles and debugging situations.
- **Technical Communication:** Simplified complex technical explanations for varying skill levels, adapting lesson plans to improve knowledge retention and ensure students could apply fundamental logic to independent projects.
- **Multi-Platform Proficiency:** Guided students through multiple development platforms, including Scratch and MakeCode, enabling students to adapt their programming knowledge to different technical environments and real-world scenarios.
- **Leadership & Management:** Managed classroom dynamics and delivery schedules across multiple sites, maintaining high engagement through interactive coding challenges and collaborative debugging exercises.

Projects

Autonomous ML Optimisation Platform | Encode AI Hackathon Project

Mar 2026 – Mar 2026

- **Frontend Development & Data Visualisation:** Collaborated in a **team of three** to develop a React dashboard for an autonomous machine learning experimentation platform, visualising real-time training progress and model performance improvements (**0.72 to 0.83 ROC-AUC**) across iterative runs.
- **API Integration & Real-Time Monitoring:** Implemented asynchronous polling and state management to integrate with a FastAPI backend, displaying live experiment status, iteration history and terminal-style execution feedback using **Framer Motion animations and Recharts charts**.

Application Tracking System | Independent Project

Dec 2025 – Feb 2026

- **Desktop Application Development:** Built a **local-first desktop application** using **Electron, React (Vite), Node.js** and **SQLite** to replace Excel-based job tracking, enabling structured data entry, automated validation and management of **100+ applications**.
- **Analytics & Insights:** Implemented analytics for **trends analysis** and performance comparison, providing actionable insights into job search strategy while ensuring all data remained **securely stored offline**.

AI Media Analysis Platform | AWS Hackathon Project

Jan 2026 – Jan 2026

- **System Development:** Collaborated in an intensive 3-day **AWS hackathon** with senior architects to build a scalable, **serverless AI platform** using **Python, AWS Bedrock, Transcribe** and **Lambda**, automating transcription, summarisation and Q&A for the Royal Society of Chemistry's Faraday Discussions (150+ hours of annual dialogue).
- **Performance Impact:** Reduced publication timelines by **90%** and manual effort by **80%**, saving **6 FTE days per event** using **Amazon S3, OpenSearch** and custom vocabularies.

Offline Medical Database Application | Client Project

Oct 2025 – Nov 2025

- **Edge Computing & Deployment:** Co-engineered a Next.js and TypeScript MVP deployed on Raspberry Pi hardware to enable secure patient data capture in zero-connectivity environments across the Algerian Sahara.
- **Architecture & Impact:** Designed a modular, offline-first database with strict TypeScript validation and local persistence, delivering a field-ready solution that was successfully adopted and scaled by the internal medical team.

Frictionless, Syntax Error Correction | Final Year Project

Dec 2023 – May 2024

- **Tool Development:** Built a **full-stack code analysis tool** using **React Vite** and **MongoDB database** to automate syntax checking and formatting across **5+ programming languages**, including Java and Python, reducing debugging time by **20%**.
- **Research & Architecture:** Designed the system using **code quality metrics** such as **Cyclomatic Complexity**, implementing **Regex-based detection** and customised code formatting libraries.

Education

Brunel University: BSc Computer Science (Software Engineering)

Sep 2021 – Jul 2024

- **Grade Achieved:** Upper Second-Class Honours
- **Dissertation:** "Automatic Formatting and Syntax Error Correction of Code Snippets"
