Profile

Recent graduate with a 2:1 BSc in Computer Science (Software Engineering), skilled in **React**, **Python** and **Java**. Experienced in collaborative environments with a passion for creating impactful software solutions as demonstrated in my university projects and client-facing experience. Bringing both problem-solving and effective communication skills, eager to apply my knowledge and skills in a professional environment.

Education

BSc Computer Science (Software Engineering)

Sep 2021 – Jul 2024 | London

Brunel University | 2:1 Honours

Dissertation: "Automatic Formatting and Syntax Error Correction of Code Snippets"

Professional Experience

Software Engineering Intern | Offdays

June 2025 – Present

- Developed "**Offdays-shareables**," a React + Vite TypeScript application for generating downloadable #OOO custom profile banners (mirroring LinkedIn's "open to work" feature), enhancing user engagement and brand presence.
- Took full ownership of the project's development lifecycle, implementing Google Analytics and demonstrating strong initiative by selecting, editing and preparing high-quality digital assets, this approach improved overall quality and streamlined content integration and asset preparation by an estimated 15%.
- Engaged in continuous feedback loops through weekly manager check-ins, leveraging **Git/GitHub** for **version control (pull requests, merge reviews)**. This ensured transparent communication, efficient issue resolution, and rapid adaptation to significant design and feature changes.

Software Developer (Volunteer) | The Orange Trust

Jun 2023 – Present

- Collaborated in a cross-functional team of three to develop the organisation's main website, utilising **Agile methodology** and management tools such as **Trello** and **Microsoft Excel** to streamline project cycles and improve delivery efficiency by **30%**.
- Collaborated closely with the director to refine client requirements and designed the site's user interface using Figma, resulting in a dedicated front page that enhanced the organisation's digital presence and boosted user engagement.

Coding Teacher | Innovation Pod

Feb 2025 – July 2025

- Teaching in beginner-friendly **coding** lessons for groups of 20-25 primary school students, using **live coding examples** to help their comprehension of fundamental **coding concepts** and fostering an interest in technology.
- Optimised lesson flow and adjusted explanation for varying skill levels, iterating on exercises to improve engagement and knowledge retention. Ensuring lessons are fun, interactive and well organised.

Projects

IbrahimIF.dev | Personal Project

Apr 2025 – Jun 2025

- Designed and built a dynamic online portfolio, using React + Vite for a responsive structure and Three.js for engaging 3D elements, demonstrating a blend of technical proficiency and effectively presenting my professional accomplishments and capabilities.
- Implemented diverse, unique features including hidden interactive elements, detailed project showcases, and a comprehensive Overview section, continuously improving the platform through extensive iterations to deliver a refined and polished user experience.

CopyCat (AI Voice) | Personal Project

May 2025 – May 2025

- Built a **Python**-based voice assistant capable of real-time microphone recording, speech-to-text conversion (Google Speech Recognition), and text-to-speech responses (Eleven Labs API).
- Implemented smart text processing to provide dynamic and context-aware replies, including special responses to specific user inputs. Showcasing practical application of voice processing and natural language understanding.

Pinnacle Studio Architecture | Client Project

Aug 2024 – Sep 2024

- Led the development of a responsive website in a **two-person agile team**, managing design using **Figma** and implementation using **React Vite** through virtual paired programming and iterative feedback.
- Deployed the site via **Vercel**, leveraged **GitHub** for continuous integration and maintained direct client communication to align deliverables with user experience.

Frictionless, Syntax Error Correction | Final Year Project

Dec 2023 – May 2024

- Developed a full-stack tool using a **React Vite** frontend and **Node.js/Express** with a **MongoDB** database to automate code analysis, basic syntax error detection, and formatting across 5+ programming languages, including **Java** and **Python**. The tool was validated to reduce manual debugging and indenting time by 20%.
- Architected the solution based on a research study of code quality and metrics such as Cyclomatic Complexity, implementing core functionality with CodeMirror for the editor and Regex for pattern-based detection, and a customised third-party library for automated code formatting.

Skills

Programming Languages: JavaScript | Java | Python | TypeScript

Frontend Development: React.js | Next.js | HTML | HTML5 | CSS | CSS3 | Tailwind CSS

Backend Development: Node.js | Express | REST APIs

Databases: MySQL | MongoDB | MongoDB Atlas | Firebase

Tools & Platforms: Git | GitHub | Vercel | Figma | Visual Studio Code | JUnit

CS Fundamentals: Algorithms | OOP | System Design | SDLC

Methodologies: Agile (Scrum) | CI/CD

Currently Learning: AWS Cloud Practitioner
